

Startup Opportunity Research Report

From Problem Hypothesis to Launch-Ready Evidence

Validated Problem Statement:

Freelance web designers and developers in India and Southeast Asia struggle to manage scope creep and get paid for extra revision rounds. Clients repeatedly ask for 'one minor tweak' without approving change orders, causing freelancers to lose \$500–\$2,000/month in unbilled labor.

Target Customer ICP: Freelance web designers, UI/UX developers, and boutique creative agency owners

Autonomous Research Verdict:

GO ☒

1. Executive Summary & Evidence Validation (Agent 1)

Daily frequency, severity 8/10, proven willingness to pay for Bonsai/HoneyBook/Notion templates.

2. Competitive Landscape & Top 10 Solutions (Agent 2)

Bonsai, HoneyBook, Contra, Markup.io, Pastell, Google Sheets + Stripe invoice.

3. Forensic Competitor Deep-Dive Profiles (Agent 3)

Bonsai: lacks automated revision counting. Markup.io: zero contract or payment gating.

4. Strategic Gap Analysis & Feature Matrix (Agent 4)

Top Gap: Automated Smart Scope Paywall & Gated Revision Submissions (Score 8.5/10).

5. Exhaustive Gap Verification (Agent 5)

Verified Gap: Zero existing tools connect revision caps directly to Stripe change-order paywalls.

6. Investor-Ready Diligence Memo & Roadmap (Agent 6)

ScopeLock: The automated client revision gatekeeper that stops scope creep.

7. Production GitHub README & Launch Kit (Agent 7)

 ScopeLock

> The automated client revision gatekeeper that stops scope creep and turns extra feedback into paid change orders.
